

CONTERRA CLOUD CONNECT

Connecting your business to a Cloud Service Provider using your standard Internet service can lead to lower stability, higher latency and greater security risks.

Conterra Cloud Connect is the smarter way to link your organization's network to the cloud.

Benefits

- Improved performance and stability
- A dependable connection at guaranteed fast speeds
- Enhanced stability and lower latency
- Private connection to a multi-cloud environment with a secure connection between the different clouds
- Simplify multi-cloud connectivity by linking multiple cloud environments to any network resource
- Flexible, virtual interconnection within the Equinix Fabric
- Secure fiber-based connection

• How it Works

Direct connections have limitations such as single connection per Cloud Provider environment, rigid scalability, and overall higher economic impact on your organization. Conterra Cloud Connect provides valuable benefits to organizations that rely on cloud-based services to operate. The technology allows businesses to connect to cloud providers by using virtual cross-connects to access multiple cloud environments such as Azure, AWS, and Microsoft, with a single connection.

HYBRID MULTI-CLOUD CONNECTIVITY

Enable your hybrid multi-cloud strategy with easy to manage, private connections from your data center resources to and between thousands of partners through the Equinix Marketplace.

ENABLING ACCESS TO CONTERRA CLOUD CONNECT

Connection to the Cloud is an extension of an Enterprise network. Conterra Cloud Connect enables customers to establish connections to cloud providers as a node on their Conterra Fiber Ethernet network.
