

# CONTERRA MANAGED WIRELESS FAILOVER

## 100% FIBER SERVICES

Conterra Managed Wireless Failover provides a secondary internet network that kicks in immediately if your fiber connection experiences an outage. Keep POS systems and vital applications running no matter what with our Business Continuity and Disaster Recovery solution.

### • How it works

To set up Conterra Managed Wireless Failover, our local team will install a wireless router with SIM card to access a wireless network available at your location. If necessary, an antenna extension will be provided to boost signal strength to adequately support vital applications during failover. Your failover system will automatically switch to wireless in the event of a fiber outage, and automatically revert back to the primary network when the fiber is deemed stable.

### • What it features

- Affordable backup solution
- Flat price every month, no hidden fees
- Unlimited data usage
- Protects against lost revenue, lost productivity and lost brand trust

### • Who it benefits

- Retail
- Hospitality
- Financial services
- Any business that relies on a point-of-sale (POS) system

# FLEXIBLE DEPLOYMENT FOR OPTIMAL SIGNAL STRENGTH

Managed Wireless Failover devices are designed to receive the best possible 5G/LTE signal. The device utilizes Power over Ethernet (PoE) so you can run a high-quality ethernet cable to a location with optimal signal strength, up to 100m away from the Conterra Managed Router or Conterra Managed Appliance.

# FLEXIBLE WAN CONNECTIVITY

Managed Wireless Failover offers new WAN connectivity options with an Ethernet WAN port, in addition to the LTE WAN links. Conterra Managed Router will automatically engage failover options to ensure connectivity if the primary link is experiencing issues.
